

# SUSHIL CHAND

Senior Software Engineer | Backend, Distributed Systems & Cloud

Delhi, India | chandsushil5@gmail.com | +91 8698069093

## SUMMARY

Senior Backend Software Engineer with 9+ years of experience designing, building, deploying and scaling production-grade distributed systems and cloud-native applications. Experienced in technical leadership, system architecture, backend engineering, data pipelines, CI/CD, cloud infrastructure, authentication and performance optimization. Proven track record of leading engineering teams, mentoring engineers, raising code quality standards, driving architecture and technology decisions, collaborating cross-functionally and owning systems end-to-end from design through development, deployment, monitoring and production operations.

## CORE SKILLS

**Technical Leadership:** System Architecture, Technical Strategy, Design Reviews, Code Reviews, Engineering Best Practices, Technical Decision Making

**People Leadership:** Team Leadership, Mentoring, Cross-Functional Collaboration, Agile/Scrum, Sprint Planning, Scrum Master

**Backend & Distributed Systems:** Python, FastAPI, Django, REST APIs, Microservices, Distributed Systems, Celery, Celery Beat, RabbitMQ, Google Pub/Sub

**Cloud & Infrastructure:** AWS, GCP, Azure, Docker, AWS ECS, Amazon ECR, AWS Lambda, Amazon RDS, S3, API Gateway, CloudWatch

**Data & Search:** RDS PostgreSQL, MongoDB, Redis, OpenSearch, pgSync, Data Pipelines, Data Synchronization, ETL

**CI/CD & DevOps:** GitHub Actions, CI/CD, Docker, Containerization, Git

**Security:** AWS Cognito, MFA, OTP Verification, Authentication Flows

**Observability:** CloudWatch, Sentry, New Relic, Metrics, Monitoring, Cloudflare

## PROFESSIONAL EXPERIENCE

Senior Software Engineer — Credhive Fintech  
Delhi, India

Sep 2024 – Present

- **Lead a backend engineering team**, providing technical direction, architecture guidance, code reviews, task planning and delivery ownership for production systems.
- **Mentor and onboard junior engineers**, providing guidance on system design, backend development, debugging and engineering best practices.
- Conduct **code reviews and design reviews** to improve code quality, maintainability, consistency and adherence to engineering standards across the team.
- Lead backend architecture and development of a scalable order management platform serving **3.5M+ registered and 10M+ unregistered companies**.
- Own backend services across the development lifecycle, including **architecture, technology decisions, API design, implementation, testing, CI/CD, deployment, monitoring and production support**.
- Designed and shipped high-performance **REST APIs using FastAPI**, deployed with Docker and Uvicorn on AWS.
- Built automated **CI/CD pipelines using GitHub Actions**, with containerized application deployments through **AWS ECS and Amazon ECR**.
- Designed and implemented data pipelines using **pgSync** to synchronize data from **Amazon RDS PostgreSQL to OpenSearch**, enabling efficient search and retrieval across large datasets.
- Integrated **AWS Cognito** for authentication and implemented **Multi-Factor Authentication (MFA)** to strengthen application security.
- Designed and implemented an **OTP verification workflow using AWS Lambda**, integrating DLT registration into the flow to optimize SMS delivery and reduce OTP-related SMS costs.
- Designed an internal data-labeling system for scraped company data, improving downstream report reliability and data quality.
- Developed a lead management platform tracking and engaging **13M+ companies**, supporting sales and customer acquisition workflows.
- Improved backend and report-generation performance by **40%** through application and database optimization.

**Tech Stack:** Python, FastAPI, PostgreSQL, Amazon RDS, Redis, Docker, AWS ECS, Amazon ECR, AWS Lambda, AWS Cognito, OpenSearch, pgSync, GitHub Actions, Sentry

## Software Engineer II — Attentive.Ai

May 2022 – Apr 2024

Noida, India

- **Led a cross-functional engineering team** responsible for backend architecture and delivery of job scheduling, crew management and timesheet automation systems.
- Provided technical direction, participated in architecture and design decisions and coordinated engineering delivery with product and other stakeholders.
- **Mentored and onboarded junior engineers**, helping them understand the codebase, development practices, system architecture and production workflows.
- Performed **code reviews and provided technical feedback** to improve code quality, maintainability and adherence to team engineering standards.
- Architected backend systems for job scheduling and timesheet automation supporting **10,000+ users**.
- Built a timezone-aware timesheet engine and automated clock-out system using **Celery and Celery Beat**.
- Integrated **Google Pub/Sub** for asynchronous microservice communication, reducing latency by **30%**.
- Designed backend infrastructure for crew management, job tracking, scheduling and automated timesheet generation.
- Developed scalable Django and PostgreSQL services supporting high-volume mobile application workflows.

**Tech Stack:** Python, Django, PostgreSQL, Docker, Celery, Celery Beat, GCP, Google Pub/Sub

## Software Engineer — Veritas Technologies

Jul 2017 – Apr 2022

Pune, India

- Served as **Scrum Master for 2 years**, facilitating sprint planning, retrospectives, backlog refinement, daily stand-ups and cross-functional coordination.
- Worked with engineering and product stakeholders to identify blockers, improve Agile development processes and maintain predictable delivery.
- **Mentored and onboarded junior engineers**, helping team members ramp up on the codebase, development workflows and technical practices.
- Conducted **code reviews** and provided technical guidance to improve code quality, maintainability and adherence to engineering standards.
- Built a cloud discovery platform supporting **AWS, GCP and Azure**, increasing platform adoption by **30%**.
- Refactored resource-fetching logic, reducing resource retrieval response time by **50%**.
- Designed a backup system using snapshot generation, reducing cloud infrastructure costs by **35%**.
- Automated application snapshot deployment scripts in **Python**, improving deployment accuracy by **40%**.
- Developed a cloud-agnostic deployment and testing framework, improving developer productivity by **50%**.
- Developed backend services and automation for application-consistent VM snapshots with minimal impact on production workloads.

**Tech Stack:** Python, C++, MongoDB, RabbitMQ, Docker, Linux, AWS, GCP, Azure

## EDUCATION

---

### Bachelor of Engineering, Information Technology

2013 – 2017

Army Institute of Technology, Pune
